

Nitro Strings

String Specification Sheets

Thank you for the order for Nitro Strings. To ensure that your strings fit your bow precisely, we would request that all of our customers complete the appropriate specification sheet. The specification sheets have been designed so that they can be printed and scanned, or, can be completed online by using Adobe Reader.

Instructions;

Which Specification Sheet Do I Need?

Select your bow type from the two specification sheets listed:

One Cam

For One, Single or Solo cam bows

OR

Two Cam

For Two, Dual, Cam ½ or Binary cam bows

How Do I Complete the Specification Sheet?

The specification sheet can be completed by two methods;

1. Click directly on the sheet required and print the sheet from your browser window, complete the information required, scan the specification sheet and email the completed sheet to your string supplier.

Or, Alternatively.

2. Right click on the sheet required and select "Save Link As....." from the popup menu. Save the file to your computer's hard drive.

To complete the specification sheet, simply open the document with Adobe Reader, (this is included on many computers or can be downloaded from Adobe for free), simply then click the red boxes to complete the form and email the details to your string supplier.

Why Should I Complete The Specification Sheet?

We have designed this custom specification sheet as we have found many bows have been adjusted and modified from the manufacturer's specifications. If you are certain your bow conforms to the string specification as specified by the manufacturer, we can build your string to these specifications.

If you have any questions regarding the specifications of your strings, please contact your string supplier directly.
